DETAILED ACTION

1. This Office Action is in response to Applicant's amendment filed on 5/5/2006.
2. Claims 2, 10-12, 20, 23, 24, 30 and 34-37 have been amended.
3. Claims 1, 7-9, 26-28, 32, 33 and 40-46 have been canceled.
4. Claims 2-6, 10-25, 29-31 and 34-39 are pending.

Allowable Subject Matter

5. Claims 2-6, 10-25, 29-31 and 34-39 are allowed.
6. The following is a statement of reasons for the indication of allowable subject matter. The invention is directed to determining that a source IP address is spoofed if the source IP address is not bound to the source MAC address and the source MAC address is not associated with a gateway routing device. This limitation is present in each independent claim.

The updated prior art search revealed "Using Router Stamping to Identify the Source of IP Packets" by Doeppner et al. as the closest prior art (hereinafter Doeppner). Doeppner creates an audit trail from the sender to the destination of an IP packet so that tracing the packet to the origin will be easier. However, there is no teaching in Doeppner, or other prior art cited, that uses an association between the MAC address and a gateway routing device in determining whether or not a source IP address is spoofed.

The prior art, fails to anticipate or fairly suggest the limitation of applicant's independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103

Art Unit: 2134

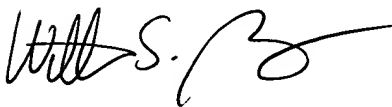

would be proper. As a result, the claimed invention is considered to be in condition for allowance as being novel and non-obvious over prior art.
